

Panpsychism

Read the article on panpsychism from the Internet Encyclopedia of Philosophy available here:

<https://www.iep.utm.edu/panpsych/>

(It wouldn't hurt to look up some of the references therein.) According to this article panpsychism is not so much a philosophy as a meta-philosophy, a philosophy about philosophies, a theory about theories. With this as an invitation, invent your own version of panpsychism. Be sure to answer the obvious objections.

- How can an electron have consciousness?
- How is it that a mountain, which has many more atoms than we do, is not more intelligent?
- Is there any experimental evidence to support your theory?
